DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Behin et al. (6,744,173).

Re to claims 1 and 14, as depicted in figs. 1D and 3I, Behin et al. discloses a substrate (102/310) having an opening, a beam (e.g., first comb structure 118) protruding through the opening of the substrate (102/310). As depicted in fig. 3I, Behin et al. discloses a fixed electrode (e.g., first comb fingers (324) including top layer (324A) and a bottom layer (324B)). As depicted in fig. 1D and 3I, Behin et al. discloses that the beam (e.g., first comb structure 118/322) is movable in a vertical direction of the substrate (310). Behin et al. discloses the capacitance of the vertical comb drives is measured to monitor the angular positions of the rotating element (106) (col. 9, lies 39-50). Therefore the device of Behin et al. teaches an acceleration sensor which is equivalent to a sensor for detecting the physical quantity of beam movable in the vertical direction.

Re to claim 2, as depicted in fig. 3I, Behin et al. discloses a fixed electrode (e.g., first comb fingers (324) including top layer (324A) and a bottom layer (324B)). The top

and bottom layers (324A, 324B) are which is equivalent to a first and second fixed electrodes.

Re to claim 3, as depicted in fig. 3I, Behin et al. discloses the second fixed electrode (e.g., top layer 324A) is disposed over the first fixed electrode (e.g., bottom layer (324B). As depicted in fig. 3I, Behin et al. discloses a second fixed electrode (e.g., top layer 324A) having a top surface disposed on a same plane as the top surface of the movable electrode (e.g., second comb fingers 322). As depicted in fig. 3I, Behin et al. discloses a first fixed electrode (e.g., bottom layer 324B) having a bottom surface disposed on a same plane as the bottom surface of the movable electrode (e.g., second comb fingers 322).

Re to claims 4 and 5, Behin et al. discloses that the capacitance across the comb fingers (115 and 117) may be used to sense the angular positions of the rotating element (106) (see fig. 1D, col. 9, lines 39-43). As depicted in fig. 1D and 3I, Behin et al. discloses the movable electrode (e.g., first comb structure 118 or second comb fingers 322) is movable upwardly. As depicted in fig. 3I, Behin et al. discloses the first capacitor is formed by the first fixed electrode (e.g. top layer 324A) facing the movable electrode (e.g., second comb fingers 322); and the second capacitor is formed by the second fixed electrode (e.g. bottom layer 324B) facing the movable electrode (e.g., second comb fingers 322).

Re to claims 6 and 7, as depicted in figs. 1D and 3I, Behin et al. discloses that the movable electrode (e.g., first comb structure 118 or second comb finger 322) and the first and second fixed electrodes (e.g., top layer 324A and bottom layer 324B) have a rod

Art Unit: 2856

shape. Re the further limitations of claim 7, as depicted in fig. 3I, Behin et al. discloses both sides of the movable electrode (e.g. second comb fingers 322) and both sides of the first and second fixed electrodes (324A and 324B) are parallel to the vertical direction of the of the substrate (310).

Re to claim 8, as depicted in fig. 3I, Behin et al. discloses that the first and second fixed electrodes (e.g., first comb fingers (324) including top layer (324A) and a bottom layer (324B)) are cantilevered from the substrate (310).

Re to claim 9, as depicted in fig. 1D, Behin et al. discloses the beam (e.g., first comb structure 118) includes a pair of spring portions (e.g., flexures 108), a massive portion (e.g., rotating element 106), and a plurality of movable electrodes (e.g., second comb fingers 117).

Re to claim 10, as depicted in fig. 3I, Behin et al. discloses the first electrode (e.g., first comb fingers (324)) including a first and second fixed electrode (e.g., top layer 324A and the bottom layer 324B). Behin et al. discloses the opening of the substrate (310) has a rectangular shape such that the substrate includes a pair of latitudinal sides and a pair of longitudinal sides. As depicted in fig. 3I, Behin et al. discloses that the first and second fixed electrodes (top layer 324A and bottom layer 324B) each protrudes from both of the latitudinal sides of the substrate (310). Furthermore, Behin et al. discloses the beam (e.g., second comb fingers 322), the fixed electrode (e.g., first comb fingers (324A, 324B), and the substrate (310) has plane symmetry.

Re to claim 11, Behin et al. discloses that the capacitance across the comb fingers (115 and 117) may be used to sense the angular positions of the rotating element (106)

Art Unit: 2856

(see fig. 1D, col. 9, lines 39-43). As depicted in fig. 3I, Behin et al. discloses the first capacitor is formed by the first fixed electrode (e.g. top layer 324A) facing the movable electrode (e.g., second comb fingers 322); and the second capacitor is formed by the second fixed electrode (e.g. bottom layer 324B) facing the movable electrode (e.g., second comb fingers 322). As depicted in fig. 3I, Behin et al. discloses the second fixed electrode (e.g., top layer 324A) is disposed over the first fixed electrode (e.g., bottom layer (324B). As depicted in fig. 3I, Behin et al. discloses a second fixed electrode (e.g., top layer 324A) having a top surface disposed on a same plane as the top surface of the movable electrode (e.g., second comb fingers 322). As depicted in fig. 3I, Behin et al. discloses a first fixed electrode (e.g., bottom layer 324B) having a bottom surface disposed on a same plane as the bottom surface of the movable electrode (e.g., second comb fingers 322).

Re to claim 12, as depicted in figs. 1D and 3I, Behin et al. discloses that the movable electrode (e.g., first comb structure 118 or second comb finger 322) and the first and second fixed electrodes (e.g., top layer 324A and bottom layer 324B) have a rode shape. As depicted in fig. 3I, Behin et al. discloses both sides of the movable electrode (e.g. second comb fingers 322) and both sides of the first and second fixed electrodes (324A and 324B) are parallel to the vertical direction of the of the substrate (310).

Re to claim 13, Behin et al. discloses that the capacitance across the comb fingers (115 and 117) may be used to sense the angular positions of the rotating element (106) (see fig. 1D, col. 9, lines 39-43). Behin et al. the reference '173 is classified under 73/514.32 which is a capacitive type acceleration sensor. Behin et al. discloses the

Art Unit: 2856

Page 6

capacitance of the vertical comb drives is measured to monitor the angular positions of

the rotating element (106) (col. 9, lies 39-50). Therefore the device of Behin et al.

teaches an acceleration sensor, which is equivalent to a sensor for detecting the physical

quantity applied to the substrate. Behin et al. discloses the substrate (102) is made of a

semiconductor, and a fixed electrode (324) and beam (e.g. first comb structure 118) that

are inherently made of a doped semiconductor.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Tamiko D. Bellamy whose telephone number is (571) 272-2190.

The examiner can normally be reached on Monday - Friday 6:30 AM to 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Hezron Williams can be reached on (571) 272-2208. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
